SEALING PAD DESIGNS

The HILCO® valve pad design has evolved through the years and currently consists of two options:

B-STYLE VALVES

- Provide metal to metal sealing. Sealing pad is 316 SS coated with a polymer-based moly-graphite coating for low turning torque.
- Available for all sizes.
- Maximum leakage of 40 ml/min on the offline side (ISO VG 22 oil, 70°F).

E-STYLE VALVES

- Utilizes resilient Quad-Ring elastomer secured in a 316 SS pad.
- Standard for sizes through 6"
- Can be retrofitted into existing B-Style bodies.
- Maximum leakage of less than 1 ml/min on the offline side (water).

TYPES OF HILCO® TRANSFER VALVES THAT UTILIZE THE REBUILD KITS:

- 6-way B-series transfer valves
- 6-way E-series transfer valves
- FT-Split transfer valves (B & E style pads)

HILCO® VALVE ADVANTAGE

SPRING LOADED FLOATING PAD

- Pad wipes bore clean with transfer.
- Pad seal compression is function of line pressure and releases with equalization.
- Quick, easy, low torque changeover.
- Reduces potential for operator error.
- Reduces the number of internal parts.
- Affords practical field maintenance.
- No condition of over-pressurization of off-line side.
